

Corporate Summary

Logic Plus provides electronic and software engineering services for consumer electronics, aerospace, medical and industrial clients. The company leverages its extensive multi-industry knowledge to optimize designs, which meet cost, functionality, reliability and manufacturability goals. Logic Plus is an SBA registered small business with DOD, FDA and commercial program experience.

Company Background

Founded in 1995 with headquarters in San Luis Obispo, CA, Logic Plus plays a key role in the outsourced embedded system design field, and helps clients enjoy significant cost savings while reducing critical time to market for new products. Logic Plus has created the internal systems required to meet the needs of both small and large projects, and established proven client communication skills to review development progress at any time. The company provides post design support to all clients to ensure long-term success of the project once in production.

Logic Plus is lead by a strong management team with more than 100 years design engineering and project management experience. Logic Plus' co-founder and chief engineer has managed close to 50 design projects in multiple industries, always driven by the goal to deliver what the client wants and on time. Logic Plus' impressive client list includes projects completed for Mattel Inc., and the US Army.

Logic Plus is a privately held corporation with no outside investors, and has developed a working environment where each individual is respected for their contribution to the overall success of all projects. The company has assembled an advisory board of industry experts to review technology and business issues. Also Logic Plus has formed strategic alliances with 2 contract manufacturers to offer clients complete design through small volume to high volume manufacturing services.

Client Quotes

Logic Plus took the time to work closely with us in fulfilling a software engineering need. From start to finish, nothing was overlooked. The application was easy to roll out to our customers, customizable enough to handle the varying systems we work with, and stable enough to not worry about its functionality down the road.
 Hank Wethington, CEO, Information Logistics

While working as a project manager for Mattel, I worked with Logic Plus on various embedded hardware and software development projects. Despite a tight schedule, complex software, and an extremely limited microprocessor, Logic Plus met all of our requirements. I found them to be reliable, innovative, and easy to work with. I highly recommend Logic Plus for critical projects. Guy Macon, Project Manager, Mattel

We probably could not have done it without the technical expertise Logic Plus has.
 Ken Heimann, Lead Engineer, Starz project
